

Report on Weather and Hop Growing Conditions: Week 18

Report Period: April 29, 2019 - May 5, 2019

HALLERTAU

Comments: Current works are the training of the hop shoots and in some cases the ploughing of the rows has been started. The cool temperatures have slowed down the growth of the plants a bit. This week there have been some rain showers, but the water supply of the ground improved only slightly.

Report on Weather and Hop Growing Conditions: Week 18

Report Period: April 29, 2019 - May 5, 2019

TETTANANG

Comments: The water supply in the ground has improved due to the rainy weather. Because of the cold temperatures the growth of the hops was slowed down a bit. The farms are currently training the hops and carried out treatments against Peronospora.

Report on Weather and Hop Growing Conditions: Week 18

Report Period: April 29, 2019 - May 5, 2019

ELBE SAALE

Comments: After the dry and warm April there were first rain showers this week, combined with lower temperatures. The wire work is mostly finished, and the hops are getting trained. First plant protection against Peronospora primary infection has been carried out.
