

# CO<sub>2</sub> Hop Extract

## Overview

- CO<sub>2</sub> Hop Extract is produced through the extraction of hop pellets with foodgrade carbon dioxide in a liquid or supercritical form.
- CO<sub>2</sub> Hop Extract contains alpha acids, beta acids and essential oils and can be used to partially or entirely replace leaf hops or hop pellets in the brewing process.
- ٠ CO<sub>2</sub> Hop Extract offers a concentrated and practical alternative to leaf hops or hop pellets. Moreover, CO<sub>2</sub> Hop Extract has a long shelf life.

## Specifications

 Description: golden green to amber extract, highly viscous at room

- temperature Alpha acids\*: max. 65 %
- max. 30 % Beta acids\*:
- Hop oil\*: 3 - 12%
- pH:
- 4.0 (± 0.5)
- Viscosity\*: 200 – 400 mPas at 45 °C (113 °F)
- Density: 0.9 - 1.0 g/ml at 20 °C (68 °F)

#### \*dependent on variety and crop year

## \* Properties

#### Appearance

Golden green to amber in color,  $CO_2$  Hop Extract is a thick syrup (depending on the hop variety and extraction conditions) that becomes more fluid when warmed.

## • Utilization

If  $CO_2$  Hop Extract is boiled for at least 50 minutes, utilization within the range of 32 - 38 % can be expected. Actual utilization will vary from brewery to brewery due to differences in equipment and process conditions.

#### Flavor

The flavor characteristics of the original hops are almost completely retained in  $CO_2$  Hop **Extract**. Early additions of  $CO_2$  Hop Extract during wort boiling mainly serve to impart bitterness.

## Chemical Residues

Nitrates and heavy metals are almost entirely eliminated in  $CO_2$  Hop Extract. In addition, many pesticide and fungicide residues are largely removed by the  $CO_2$ extraction process.

## Quality

All Hopsteiner® products are processed in facilities which fulfill internationally recognized quality standards.

## ✤Packaging

**CO<sub>2</sub> Hop Extract** can be packaged in cans, pails and drums according to customer requirements:

Cans: 0.5 to 4 kg (USA) 0.5 to 4.2 kg (Germany) Pails: 4 to 20 kg (USA only) Drums: 50 and 200 kg

E-mail: <u>sales@hopsteiner.com</u>

Mainburg, Germany Tel: (49) 8751 8605-0 Fax: (49) 8751 8605-80 E-mail: info@hopsteiner.de

Simon H. Steiner, Hopfen, GmbH

 $CO_2$  Hop Extract can be produced to any alpha acid concentration desired by our customers and packaged in cans (e.g. 450 g of alpha acids per can).

Alternatively, the alpha acid content of  $CO_2$ Hop Extract can be standardized to any given concentration using glucose. The container is then filled to a standard weight (e.g. 30 % alpha acids in 1 kg cans).

## Product Use

 $CO_2$  Hop Extract is typically added to the wort kettle as a complete or partial replacement for leaf hops or hop pellets.

#### Dosage

Kettle additions of  $CO_2$  Hop Extract are based on the concentration of alpha acids, an estimated or known utilization and the desired intensity of bitterness in the beer.

## Application

For the highest possible utilization,  $CO_2 Hop$ **Extract** should be added early in the wort boiling process.  $CO_2 Hop$  **Extract** is not very suitable for late hop additions due to its nonpolar character. However, in this situation, better results can be achieved with pre-isomerized kettle extracts such as IKE or PIKE, products that are more soluble in wort.

Pre-warming cans of  $CO_2$  Hop Extract is not necessary. Suspending punctured cans in the boiling wort will ensure that all of the extract is completely flushed out into the kettle.

Zhuhai, PRC Tel: (86) 756 322 3340 Fax: (86) 756 322 3345 E-mail: info@hopsteiner.com.cn

If  $CO_2$  Hop Extract is added by means of automatic dosing units, it should be warmed to 45 °C (113 °F) and gently mixed to ensure perfect dosing.

## Storage

 $CO_2$  Hop Extract should be stored in sealed containers at temperatures < 10 °C (50 °F). Opened containers should be used within a few days.

## Best Before Date

 $CO_2$  Hop Extract is stable for eight years from the date it was produced / packaged if stored under the recommended conditions.

#### Safety

 $CO_2$  Hop Extract is a natural product and may be safely handled using routine precautions to avoid contact with skin and, in particular, the eyes. Any product coming into contact with the skin should be immediately washed off with soap and water or an appropriate hand cleanser. If  $CO_2$  Hop Extract gets into the eyes, flush with copious amounts of water until clear and seek medical attention.

For full safety information, please refer to the relevant Hopsteiner® safety data sheet.

# \*Analytical Methods

## Concentration of Bitter Substances

Alpha and beta acids can be measured using the following methods:

- HPLC according to Analytica-EBC 7.7 or ASBC Hops-14 with the current ICE standard
- spectrophotometric method according to ASBC Hops-8 (I)

The lead conductance value can be measured using the following methods:

- Analytica-EBC 7.6
- ASBC Hops-8 (II)

#### Concentration of Hop Oil

The hop oil concentration can be measured using the following methods:

- Analytica-EBC 7.10
- ASBC Hops-13

# Technical Support

We are pleased to offer assistance and advice on the full range of Hopsteiner® products:

- copies of all relevant analytical procedures
- Safety Data Sheets (SDS)
- assistance with pilot or full-scale brewing trials
- o special analytical services
