

Report on Weather and Hop Growing Conditions: Week 26

Report Period: June 28, 2021 - July 4, 2021

HALLERTAU

Comments: In the past week, too, good growing conditions prevailed with moderate temperatures and some rain showers. Depending on location and variety, many fields developed very differently. Diseases and pests are currently mostly under control.

Report on Weather and Hop Growing Conditions: Week 26

Report Period: June 28, 2021 - July 4, 2021

TETTNANG

Comments: Summery, warm weather was followed by heavy thunderstorms with abundant rainfall, sometimes combined with heavy hail. Most of the plants have reached trellis height. When the fields were passable, treatments against peronospora were carried out.

Report on Weather and Hop Growing Conditions: Week 26

Report Period: June 28, 2021 - July 4, 2021

ELBE SAALE

Comments: Regular rainfall ensures a continued good water supply. The bitter hops, as well as the variety Saazer have reached trellis height. Due to emerging powdery mildew spraying was carried out.
