

Report on Weather and Hop Growing Conditions: Week 33

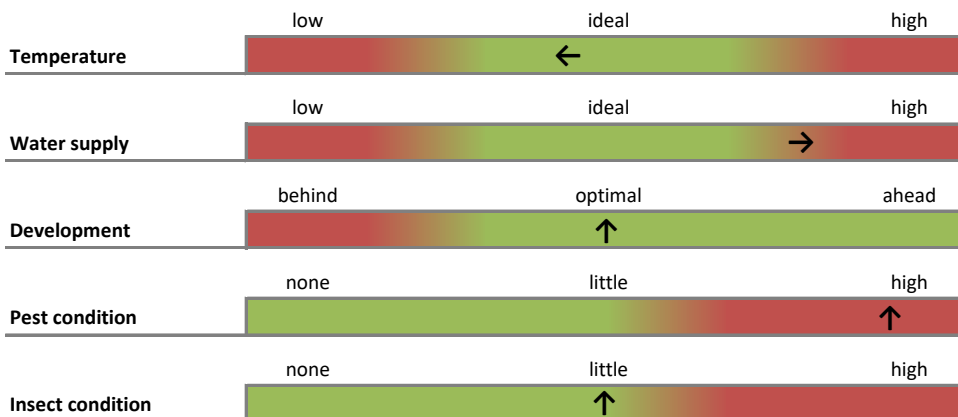

Report Period: August 16, 2021 - August 22, 2021

HALLERTAU

Variety	Comment	Development
Tradition	Lupulin formation	+
Perle	Start of lupulin formation	+
Magnum	Lupulin formation	+
Herkules	Start of lupulin formation	+

(++ very good; + good; o average; - weak; -- very weak)

(Tendency: stable ↑, decreasing ←, increasing →)

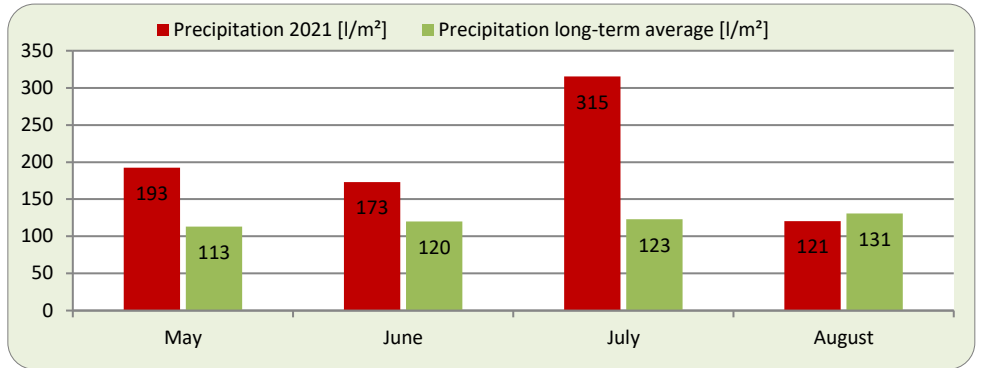

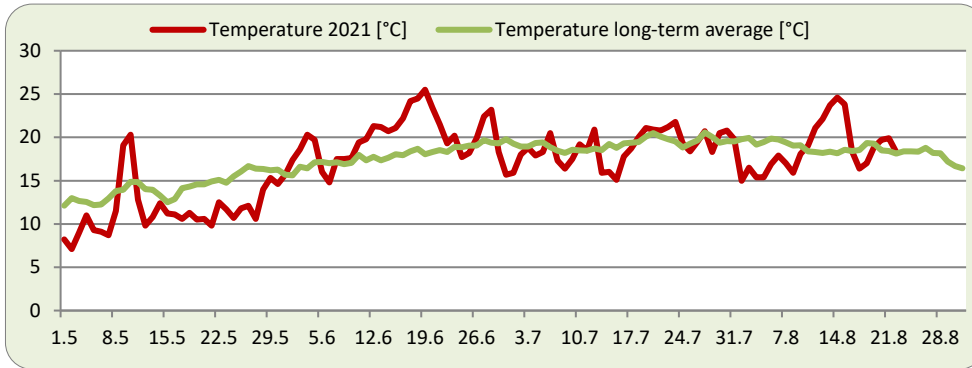

Comments: The once again changeable weather conditions delays maturity, even for early ripening varieties. There continues to be high peronospora infestation pressure. Preparations for harvest are underway.

Report on Weather and Hop Growing Conditions: Week 33

Report Period: August 16, 2021 - August 22, 2021

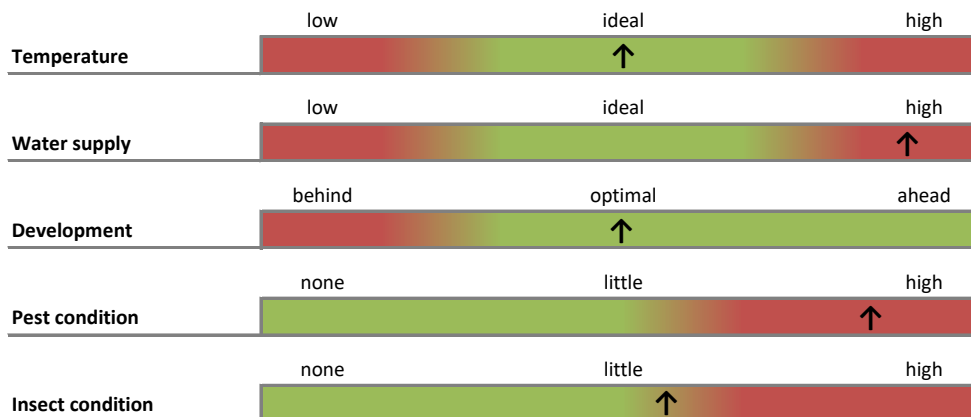

TETTNANG

Variety	Comment	Development
Tettnanger	Begin maturity	+
Mittelfrüher	Lupulin formation / begin maturity	+
Tradition	Lupulin formation	+
Herkules	Start of lupulin formation	+

Comments: Initially cool, changeable weather was followed by significantly warmer days towards the weekend. Crop protection measures, mainly against peronospora, had to be applied. For the varieties Mittelfrüh and Tettnanger harvesting will start towards the end of the week.

(++ very good; + good; o average; - weak; -- very weak)

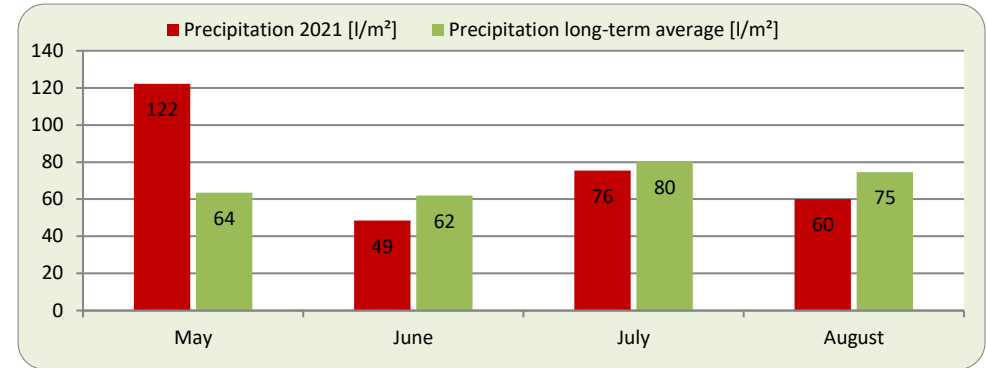

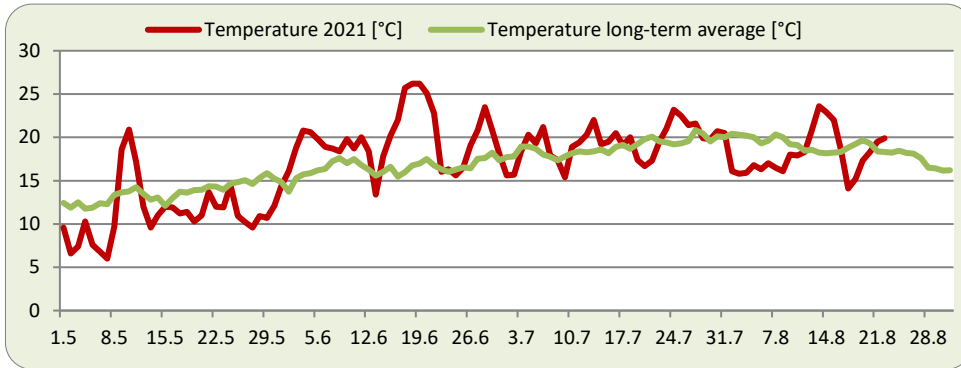

(Tendency: stable ↑, decreasing ←, increasing →)

Report on Weather and Hop Growing Conditions: Week 33

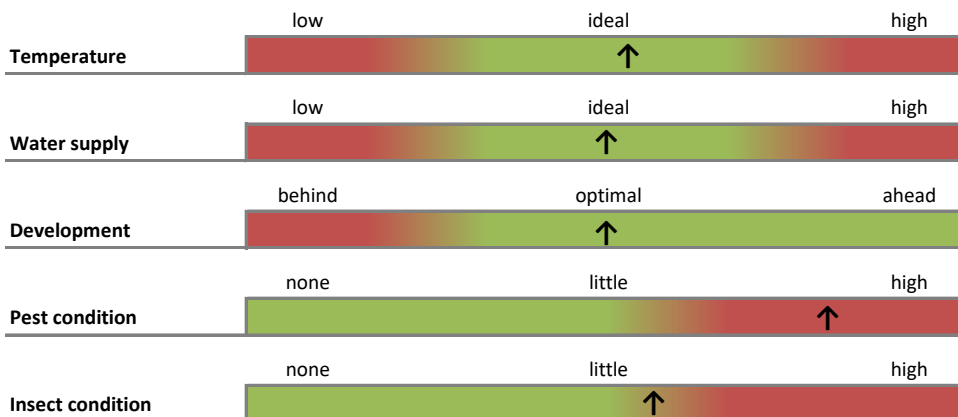

Report Period: August 16, 2021 - August 22, 2021

ELBE SAALE

Variety	Comment	Development
Perle	Lupulin formation	+
Northern Brewer	Lupulin formation/ begin maturity	+
Magnum	Lupulin formation	+
Herkules	Lupulin formation	+

(++ very good; + good; o average; - weak; -- very weak)

(Tendency: stable ↑, decreasing ←, increasing →)

Comments: The good water supply of the soils ensured good conditions for cone/lupulin formation. The early maturing varieties are starting to mature. The late varieties Magnum and Herkules receive final plant protection measures.
