

Report on Weather and Hop Growing Conditions: Week 20

Report Period: May 16, 2022 - May 22, 2022

HALLERTAU

Comments: Summer weather with ideal growing conditions allowed the hops to develop well. A hailstorm damaged about 800 ha of hop acreage on Thursday, of which about 200 ha were severe with up to 100 % head damage and damaged bines. The center was between Wolnzach, Mainburg and Geisenfeld. At the current stage of development, these hops can still recover well if the weather is favorable.

Report on Weather and Hop Growing Conditions: Week 20

Report Period: May 16, 2022 - May 22, 2022

TETTANG

Comments: Warm and humid weather favored the growth. The soil is well supplied with water by thundershowers. The planters are busy with re-training, fertilizing and plowing the rows. Strong migration of the aphid fly is observed, first treatments have already been carried out.

Report on Weather and Hop Growing Conditions: Week 20

Report Period: May 16, 2022 - May 22, 2022

ELBE SAALE

Comments: It was a summery week, thundershowers provided local precipitation. Favorable conditions promoted growth but also the risk of downy mildew. The first aphids were detected, but still well below the control threshold. Training is mostly completed.
