

Report on Weather and Hop Growing Conditions: Week 23

Report Period: June 5, 2023 - June 11, 2023

HALLERTAU

Comments: The warm temperatures enabled the plants to catch up in terms of length growth, but there is still a lag in growth in most varieties. There was no precipitation in large parts of the growing area. The main work was chemical defoliation and retraining. Aphid influx is already visible in many fields.

Report on Weather and Hop Growing Conditions: Week 23

Report Period: June 5, 2023 - June 11, 2023

ELBE SAALE

Comments: There was a small amount of precipitation in the middle of the week, but it did not affect the water supply to the soil. Some farms have already started irrigation. The main work has been retraining, as well as plant protection measures against downy mildew and aphids.
